## **CLEAN UP AND DISINFECTION**

## THESE DIRECTIONS SHOULD BE USED TO RESPOND TO ANY VOMITING OR DIARRHEA ACCIDENT

Note: Anything that has been in contact with vomit and diarrhea should be discarded or disinfected.

### 1 Clean up

- a. Remove vomit or diarrhea right away!
  - Wearing protective clothing, such as disposable gloves, apron and/or mask, wipe up vomit or diarrhea with paper towels
  - Use kitty litter, baking soda or other absorbent material on carpets and upholstery to absorb liquid; do not vacuum material: pick up using paper towels
  - Dispose of gloves, paper towel/waste in a plastic trash bag or biohazard bag
- b. Wash hands with warm water and soap for 20 seconds. Dry with a disposable paper towel and put on a pair of new disposable gloves prior to cleaning.
- c. Use soapy water to wash surfaces that contacted vomit or diarrhea and all nearby high-touch surfaces, such as door knobs and toilet handle
- d. Rinse thoroughly with plain water
- e. Wipe dry with paper towels

IF CLOTHING OR OTHER FABRICS ARE AFFECTED.

- Remove and wash all clothing or fabric that may have touched vomit or diarrhea
- Machine wash these items with detergent, hot water and bleach if recommended, choosing the longest wash cycle
- Machine dry

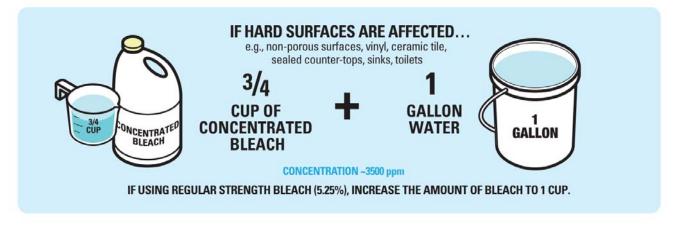

DON'T STOP HERE: GERMS CAN REMAIN ON SURFACES EVEN AFTER CLEANING!

#### Disinfect surfaces by applying a chlorine bleach solution

Steam cleaning may be preferable for carpets and upholstery. Chlorine bleach could permanently stain these. Mixing directions are based on EPA-registered bleach product directions to be effective against norovirus. For best results, consult label directions on the bleach product you are using.

#### a. Prepare a chlorine bleach solution

• Make bleach solutions fresh daily; keep out of reach of children; never mix bleach solution with other cleaners.

- b. Leave surface wet for at least 5 minutes
- c. Rinse all surfaces intended for food or mouth contact with plain water before use

# 3 Wash your hands thoroughly with soap and water

Hand sanitizers may not be effective against norovirus.

Scientific experts from the U.S. Centers for Disease Control and Prevention (CDC) helped to develop this poster. For more information on norovirus prevention, please see http://www.cdc.gov/norovirus/preventing-infection.html.
